

How to book-in Free Stock

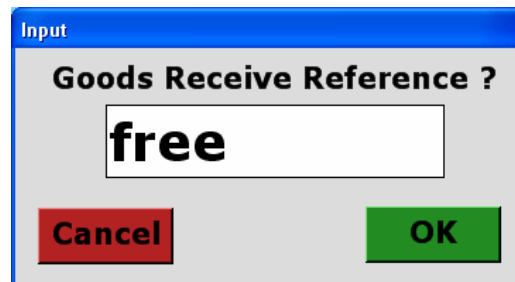

Issue 1: September 2005

Objective:

When booking-in 'Free' stock or Buy-One-Get-One-Free offers, it is a function of Sage Line 50 that the Last Cost Price in the Sage Stock module always reflects the last Goods-In or Adjustment-In.

Booking-in Free stock using the barcode scanner:

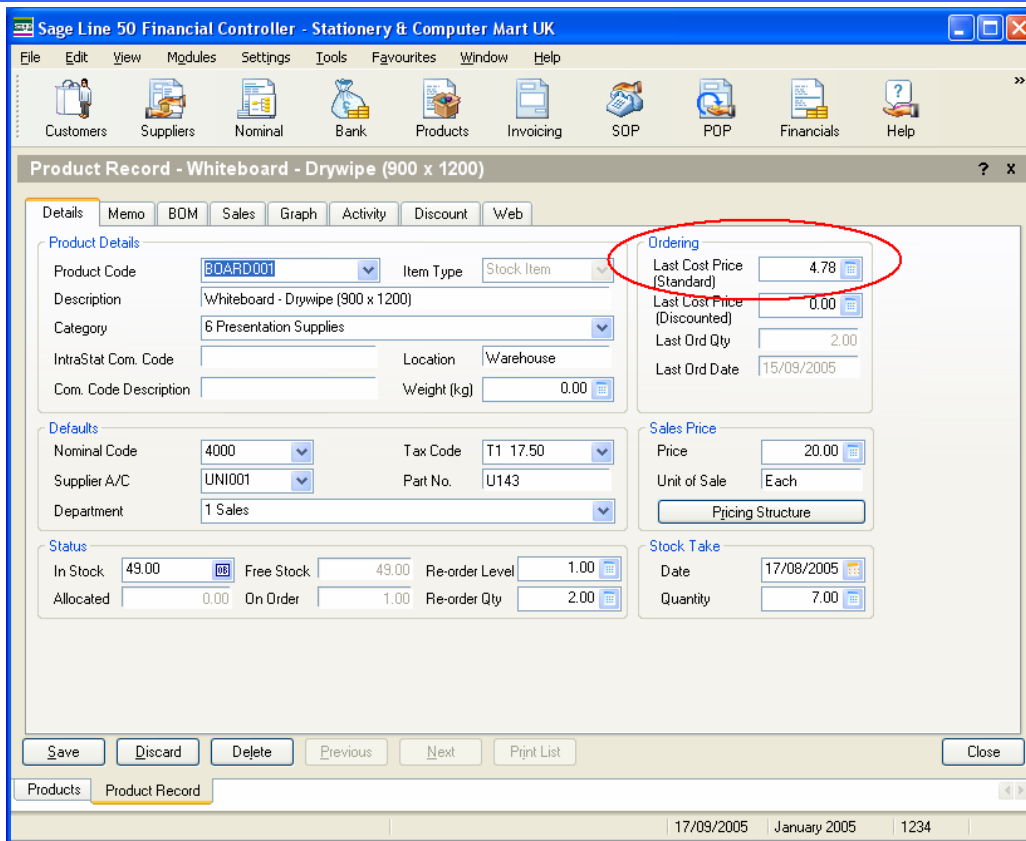

Free-stock can be booked-in as an 'Adjustment-In'. If the word 'FREE' is typed into the reference prompt (e.g. 'Free', 'in-free', 'Free stk' etc) then the cost price shall be set to zero.

The image shows a screenshot of a software dialog box titled "Input" with the main heading "Goods Receive Reference ?". Below the heading is a text input field containing the word "free". At the bottom of the dialog box, there are two buttons: a red "Cancel" button on the left and a green "OK" button on the right.

Furthermore, the Last Cost Price in Sage is 'protected', and will not be set to zero. This ensures that the cost price is available when generating the next purchase order.

Please note this change will protect the Last Cost Price when booking-in free stock through the barcode scanner, although posting an Adjustment-In with a zero price in the standard Sage Line 50 screens will always cause the Last Cost Price to be reset.

Sage Line 50 – Products screen, showing the Last Cost Price.
